C -1- FUNCTION: The lysosomal degradation of sphingolipids takes place by the sequential action of specific hydrolases. Some of these enzymes require specific low-molecular mass, non-enzymic proteins: the sphingolipids activator proteins (coproteins) (By similarity).

CC -1- FUNCTION: Saposin A and saposin C stimulate the hydrolysis of galactosylceramide by beta-galactosylceramidase (EC 3.2.1.4.5) and galactosylceramide by beta-galactosylceramidase (EC 3.2.1.4.6).

Saposin C apparently acts by combining with the enzyme and acidic lipid to form an activated complex, rather than by solubilizing the substrate (By similarity).

CC -1- FUNCTION: Saposin B stimulates the hydrolysis of galactocerebroside sulfate by arylsulfatase A (EC 3.1.6.8), GM1

Gangliosides by beta-galactosidase (EC 3.2.1.22).

CC -1- FUNCTION: Saposin B stimulates the hydrolysis of galactocerebroside sulfate by arylsulfatase A (EC 3.1.6.8), GM1

Gangliosides by beta-galactosidase A (EC 3.2.1.22).

CC -1- FUNCTION: Saposin B stimularity).

CC -1- FUNCTION: Saposin B is a homodime: (By similarity).

CC -1- FUNCTION: Saposin B is a homodime: (By similarity).

CC -1- FUNCTION: Saposin B is a specific sphingomyelin phosphodiesterase activator (EC 3.1.4.12) (By similarity).

CC -1- FUNCTION: Saposin B is a homodime: (By similarity).

CC -1- FUNCTION: Saposin B is a specific sphingomyelin phosphodiesterase by beta-galactosides (By similarity).

CC -1- FUNCTION: Saposin B is a specific sphingomyelin phosphodiesterase cc amilar to each other and are sphingolipid hydrolase activator proteins (By similarity).

CC -1- FUNCTION: Saposin B is a specific sphingomyelin beta-galactosides which are similar to each other and are sphingolipid for hydrolase activator proteins (By similarity).

CC -1- FUNCTION: Saposin B is a specific sphingomyelin bydrolase activator proteins (By similarity).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 3, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 15, Sequence 15, Sequence 3, A Sequence 4, A Sequence 3, A Sequ

Batent No. 5910568

GENERAL INFORMATION:
APPLICANT: HAMMESTEDT, ROY H, BARBATO, GUY F,
APPLICANT: CRAMER, PALMER

ITILE OF INVENTION: TO EGG SURFACES AND PROCEDURES FOR USE OF THIS MOLECULE
ITILE OF INVENTION: TO ENHANCE OR DECREASE POTENTIAL FERTILITY

NUMBER OF SEQUENCES: 16
CORRESPONDENCES: 18
ADDRESSEE: INTELLECTULAL PROPERTY OFFICE, THE PENNSYLVANIA

ADDRESSEE: STATE UNIVERSITY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MOLECULE INVOLVED IN BINDING OF SPERM

```
Sequence 60, Application US/09870759

Patent No. US20020177551A1

GRERAL INFORMATION:

APPLICANT: TERMAN, David S

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR TREATMENT OF NEOPLASTIC DISEASE

TILLE REFERENCE: 870759

CURRENT APPLICATION NUMBER: US/09/870,759

CURRENT PILING DATE: 2002-01-14

PRIOR PILING DATE: 2000-05-30

NUMBER OF SEQ ID NOS: 166

SOFTWARE: PATENTIN VERSION 3.1

SEQUENCE: NO COMPOSITION OF SEQ ID NOS: 166

                                                                                                                                                                                                                                                                                                                                                                                            ö

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     sequence 774, Sequence 775, Sequence 37, Sequence 37, Sequence 280, Sequence 281, Sequence 277, Sequence 5, Apl Sequence 159, Sequence 169, Sequence 169, Sequence 169, Sequence 17, Sequence 169, Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, Apl Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1, App Sequence 1,
